Week 10 lab exercise

1. Create an HTML file named as your first name (use our template to create this file).

    a.   Create a button with label "Add element", that would invoke a function from your JavaScript

2. Create a JavaScript file named as your studentid.js (i.e, 123123123.js)

    a.   Create a function that would be invoked when "Add element" button is clicked. This function should prompt user to enter the type of element user would like to be created (i.e, p for paragraph, div, nav, section, footer…), then create the element with text (i.e "paragraph element", "div element",…) and append it as a child to the body of your document.

Upload both your files .html and .js to the following directory in your account:

public_html/comp1231/lab/practices/wk10/
